Note: This purified product exhibits moderate enzymatic activity for CDNB, the synthetic substrate that is most commonly used for GST analyses. This human A Class GST exhibits high activity towards Δ⁵-Androstene-3,17-dione. However, as is widely known for GST activity analysis using CDNB as a substrate, low concentrations (high dilutions) of the enzyme result in lower activity values. In contrast, initial velocities are much higher for more concentrated levels of enzyme but the rate decreases rapidly. Therefore, activity toward CDNB and these considerations provide guidance when assaying this product under low concentrations or when using substrates other than CDNB.
