**Note:** This purified product exhibits high enzymatic activity for FDNB, a synthetic substrate used for GST analyses. However, as is widely known for GST activity analysis using FDNB as a substrate, low concentrations (high dilutions) of the enzyme result in lower activity values. In contrast, initial velocities are much higher for more concentrated levels of enzyme but the rate decreases rapidly. Therefore, activity toward FDNB and these considerations provide guidance when assaying this product under low concentrations or when using substrates other than FDNB.
